

NO RESPONSE

Dear Senator Allen,

The energy situation is out of hand. The technology to greatly reduce our dependence on foreign oil has existed for many decades. Shell Oil Co. demonstrated, in 1973, a modified production car that achieved more than 376 mpg. Fuel cell powered vehicles have been in production for 10 years. There are many U.S. Patents for separating water into hydrogen and oxygen gasses for use as fuel in automobile engines and also generating electrical power. A recent U.S. Patent was granted for an electrical generator with no moving parts. I have witnessed the operation of an electric motor that while performing work also provided excess electric power to the electric grid. Yet, none of this technology is available to the general public. Documentation for my statements is at: <http://byronw.www1host.com>

Senator Allen, what can you do to implement this technology for the benefit of the general public.

Regards,

Byron S. Wine III
