

THE SEA OF ENERGY

A MEANS FOR THE PRESERVATION OF THE ENVIRONMENT  
BY DRAWING KINETIC ENERGY FROM SPACE

John E. Moray

Excerpts taken from the book entitled  
THE SEA OF ENERGY IN WHICH THE EARTH FLOATS  
are reproduced by permission of  
Cosray Research Institute

Presented to the 26<sup>th</sup> Intersociety Energy  
Conversion Engineering Conference.

The great scientist Nikola Tesla theorized when he said, "Ere many generations pass, our machinery will be driven by a power obtainable at any point in the universe...throughout space there is energy. Is this static or kinetic? If static, our hopes are in vain; if kinetic - and this we know it is for certain - then it is a mere question of time when men will succeed in attaching their machinery to the very wheel-work of nature." T. Henry Moray succeeded in harnessing this universal energy.

In 1901 T. Henry Moray theorized that energy was coming from within the earth. Through continuous experimentation and in spite of the doubts held by the scientific community of that day, he discovered that the energy was not coming from the ground but from an outside source away from the earth.

The energy came in continuous surges, like the waves of the sea, more in the daytime than at night. At this time Moray had enough power to light a 16-candle power carbon lamp at about one half capacity. He labeled and defined his "Radiant Energy: The source of energy coming from the cosmos to the earth and radiating back from whence it came."

Dr. Moray was a man with many abilities. He worked as a civil engineer, an electrical engineer designing electrical layouts for many large metropolitan buildings, and was a certified member of the American Association of Engineers. Despite the many fields Moray was skilled in, his main desire was to see radiant energy become a usable source of energy.

Upon completion of his first Radiant Energy Device, many tests and experiments were conducted for the scientific and public communities. Channeling the waves of energy was done by way of an antenna. When set up and connected to the ground, priming and then tuning, the device would draw electrical energy. Results of this experimentation proved that the power generated had not originated from within the device. The device, through channeling radiant energy, produced 50,000 watts of power and worked for long periods of time.

Testing was conducted over a period of many years in remote areas free of housing, power wires, and telephone lines, all acknowledging to the legitimacy of T.H. Moray's Radiant Energy Device. A number of scientifically qualified individuals tested and signed letters of authenticity substantiating the device's capabilities. From the study of his radiant energy work, we have determined that Moray developed over thirty-six different semi-conductive and even super-conductive devices. His first germanium solid-state device (semiconductor) was submitted to the U.S. Patent Office in 1927 and was rejected on the basis that it would not work without a heated cathode.

For political reasons many people, organizations, and agencies of the day opposed him strongly. Despite the deliberate destruction of the R. E. Device, threats against his work and his family, and armed attacks by unknown assailants, T.H. Moray continued with his dream of harnessing a usable energy that the whole world could benefit from, and at the

same time save the earth from the many methods of energy retrieval which scar and pollute its land, air and seas.

Tests of the device were never conducted in secret and many people witnessed what he was doing. The device was always placed on the same table. The same hook-up was always made. The only external leads were the antenna and the ground, as described by E.G. Jensen. Jensen noted that the 60 watt incandescent lamp connected in series with the antenna did not light, even though the light on the secondary side did light. If the antenna was disconnected at this point, an 18 inch high frequency spark could be drawn out. The antenna was 70 feet in the air and 300 feet long. The wire was separated from the pole by two large ceramic insulators, entering Dr. Moray's basement laboratory through a ceramic insulator, to prevent grounding. This early generation device developed only 60 watts of power. This device was soon replaced by a second generation device.

The device had to be primed as it was not self-starting. When the pilot light was lit, and the tuning was proper, the load would come on. The device required a load at all times. He was able to power twenty 150 watt lamps, and fifteen 100 watt lamps, a flat iron, a space heater, and a motor. Each time he built a new device, he was forced because of cost, and the great effort, to cannibalize the preceding device; meaning that we never had more than one unit at a time.

In order to prove the Radiant Energy was not induction from power lines or radio stations, he took his device to outlying parts of the state, such as Strawberry Reservoir, where even a ranch telephone was more than 30 miles away. He took the device west of the Oquirrh Mountains in western Utah, to a desolate area known today as Dugway Proving Ground, (the United States Army Chemical Test Center), demonstrating adequately that the Radiant Energy would operate more than 50 miles from the closet power line, telephone line, and more than 90 miles from the closet radio station of those days. People, curiosity seekers, scientists, etc. flocked from all over the world to see the lights light, the motor run, the heater heat. Photographers well acquainted with the problem of an intense light exposure, testified of the 100 or 500 watt lamps used. Engineers such as A. B. Jensen tested the device on behalf of Mr. Gull, the head of Utah Securities and Exchange Commission, to determine that it was as represented.

E. B. Jensen speaks of Harvey Fletcher. Dr. Harvey Fletcher of the Bell Laboratories, completely examined the device. Later in writing to R. L. Judd, Dr. Fletcher stated that Moray had more power than could be explained by any means that he knew at the time. Dr. Fletcher spent hours examining the device and had ample opportunity to determine where the power came from, as he was hired to help develop the patents by R. L. Judd, the attorney for Dr. Moray. Dr. Murray Hayes, a patent lawyer and man of science, spoke of his conviction that he knew Radiant Energy was as represented.

You may ask, "What happened?" Many people do. "Why wasn't it developed?" Henry Moray found his own company, The Moray Products, stealing from him. Wallace Bennett, a United States Senator for the State of Utah, went out of his way to kill a NASA contract

for five million dollars, denying later that he did so. Dr. Henry Eyring deliberately stopped government contracts. The Eyring Research Institute has prepared a historical support document and reference material dated May 1979, which is obviously the support documentation for an Eyring Research proposal, and appeared to be a competitor. An interesting fact is, the first exhibit in the support document is a sworn statement by Dr. Harvey Fletcher, formerly of Bell Laboratories, supporting Radiant Energy. They do speak of other researchers in this field; however, the documentation is minor compared to the documentation of Dr. Moray's work. When I confronted Dr. Henry Eyring with this, he denied that the company had prepared the report that I had in my hand.

Others argue as the patent office argued, "Where is the source of energy?" In the rejection notice from the patent office, the examiner makes several mistakes, not the least of which is the fact that he assumes that the energy is originally electromagnetic in nature. But all Dr. Moray really said was that it is electrical AFTER it impinges upon his semi-conductors.

There are many sources of energy that are hypothesized today. Man has theorized that earth is a great dynamo. But no matter what hypothesis you wish to use in explaining the Radiant Energy Device, the fact remains that it did work. Valid experiments have been repeated many times under all types of conditions. Many saw it work. It is well established that the motor did run, the radio did play, and the lights did light. Sworn affidavits have been given, certifying that certain pictures were taken of the tests. Some of the witnesses are still alive, such as Chester M. Todd. Time does not allow the privilege of showing all the documentation. S. E. Bringhurst pointed out during a demonstration of the device that when the clip connecting the antenna to the device was disconnected, an 18 inch spark could be drawn from the disconnected wire to the clip.

Prior to the destruction of the device, Dr. Moray obtained a contract with the Rural Electrification Administration. Dr. Craig, his supervisor, testified in 1963 that he knew of the test results, even if he did not know how the device operated. Ben Crimm, an engineer for the REA, tested the device with a Mr. Wood, and John Jorgenson of Denver, Colorado. He spoke of the political maneuvering going on to get the REA to sponsor the project. Finally, Carmandy, the REA administrator who may have been removed because he signed the contract to develop Radiant Energy, gave Dr. Moray the terrific salary including per diem of \$25.00 a day.

After the destruction of his unit, Dr. Moray was attacked three times in his laboratory. He was shot in the leg. He and his family were threatened and fired upon from ambush. He decided it was safer to return to private research and withdrew from the REA contract. His connection with the REA resulted in the destruction of his device. It also succeeded in placing him in insurmountable debt. And so, in 1941, he began working on other research projects. He was no longer in the position to use the facilities of electronic organizations he previously had access to in the United States, and his contracts with Germany and England evaporated with the coming of World War II. And so, he was left to his own resources. Estimates of cost to carry on his research, Dr. Moray finally broke

away from many of the corporations he had formed, organizing a private company known today as COSRAY RESEARCH INSTITUTE.

The history of Dr. Moray's work is conclusive; he did produce an energy device, and this energy device, when it is restored, is capable of answering the world's needs with a non-polluting form of energy. We have the notes. It is only a matter of time before the required research money will be raised to bring his work to a conclusion. Henry Moray DID complete his work. He WAS successful in his energy experiment, and the evidence is overwhelming that he produced useful kilowatts of electrical power.

In order to carry on his work COSRAY has published the 5<sup>th</sup> edition of his book, adding the complete documentation and history so that the world could know that this non-polluting form of electrical energy is still available. This book is available to you in either hard-bound or paperback. Order blanks can be obtained from Cosray Research Institute, 2505 South 4<sup>th</sup> East, P.O. Box #651045, Salt Lake City, Utah 84165.

Thank you for your interest in our research. We are unable to furnish specific information to you with regard to Radiant Energy as the project is still considered propriety.

Over the 84 years of Dr. Henry Moray's life, he accumulated a wealth of notes, not only pertaining to Radiant Energy, but a wide range of other scientific projects. He established his own research organization for the purpose of continuing his research. Cosray plans to bring his work to a conclusion as soon as financial assistance will allow. Today, Cosray includes research conducted in two countries following the pattern set down by Dr. Moray. The House of Moray Research Foundation was established for this purpose.

We do not need technical help. It is merely a matter of time and money until this project can be completed. We need help in obtaining publicity and in raising funds for the House of Moray Research Foundation.

The Morays wish to encourage others to enter into this area of research, not to duplicate Dr. Moray's work, but to show independent verification, thus establishing it in the world.

Today a number of other researchers have entered the field, however, the Moray's have refused to endorse any of their work. From their published material no one we know has reproduced Radiant Energy. Claims of reproducing Radiant Energy from "The Sea of Energy" book are ridiculous. Others pretending to be friends deliberately attempt to discredit our work. We are not interested in other types of "free" energy devices, as to our knowledge, none have ever shown significant wattage.

We can solve the energy crisis with the help of interested financial backers which we are seeking. It is only a matter of time until Henry Moray's dream of unlimited pollution free energy comes true. We are well justified in again quoting from Tesla when he said that, "Throughout space there is energy." An energy like a sunset. An energy through which the earth floats, always oscillating like the waves of the sea throughout space.
