

(No Response)

February 11, 2005

Mr. Nicholas Horrock, Managing Editor
The Washington Examiner
6408 Edsall Rd.
Alexandria, VA, 22312

Dear Mr. Horrock,

Congratulations on your new paper, the local publications need competition. I have information of interest to the public that no media, government representative or environmental group will address. The information concerns decades old and current energy devices that could, if implemented, greatly reduce our dependence on fossil fuel. The use of these devices could also reduce the national debt.

For many years I have attempted to bring this information to the public by contacting the media, government representatives, government agencies and environment groups. For the most part my contacts have been ignored. For example, last September e-mail was sent to 119 talk show host, excluding automatic responses, one responded. Evidently the public is not supposed to know about the existence of demonstrated high mpg vehicles, one exceeded 376-mpg, and patented engine-mounted devices that separate the components of water for fuel. Because, it is so difficult to inform the public I distribute the attached flyer. The included CD essentially duplicates my web page.

Mr. Horrock, hopefully your paper will inform the public of technology that will, if implemented, be of great benefit to all.

Sincerely,

Byron S. Wine III
